This book contains the papers presented at the EU-LAT Workshop on e-Environment, held in San Jose, Costa Rica on November 30 through December 3, 2004. The EULAT project has been funded by the European Commission to hold a series of three workshops located in Latin America. The objective of the workshops is to showcase European and Latin American research in the areas of (a) e-Health (b) e-Government and e-Democracy and (c) e-Environment, and create a forum in which to bring together research groups, companies and SMEs from the European Union and Latin America to encourage collaboration on proposals to the Framework 6 funding pro

The papers of the workshop are presented in this book, organized in four topics: Environmental *Decision Support Systems, Environmental Information Systems, Data Mining and Qualitative Models,* and *Remote Sensing*

We are very glad to show the ongoing work on e-Environment and to serve as the stepping stone for new news to achieve collaboration among European and Latin American research groups to ensure optimum use of the most appropriate Information Society Technologies for the protection of the environment and sustainable development.
